The Diary of Nannie Haskins Williams Nov 23 2021 In 1863, while living in Clarksville, Tennessee, Martha Ann Haskins, known to friends and family as Nannie, began a diary. This document provides valuable insights into the conditions in occupied Middle Tennessee. A young, elite Confederate sympathizer, Nannie was on the cusp of adulthood with the expectation of becoming a mistress in a slaveholding society. The war ended this prospect, and her life was forever changed. Though this is the first time the diaries have been published in full, they are well known among Civil War scholars, and voice-overs from them were used in Ken Burns's PBS program "The Civil War." Sixteen-year-old Nannie had to come to terms with Union occupation very early

in the war. Amid school assignments, young friendship, social events, worries about her marital prospects, and tension with her mother, Nannie's entries also mixed information about battles, neighbors wounded in combat, U.S. Colored troops, and lawlessness in the surrounding countryside. Providing rare detail about daily life in an occupied city, Nannie's diary poignantly recounts how she and those around her continued to fight, long after the war was over, to maintain their lives in a war-torn community. Though numerous women's Civil War diaries exist, Nannie's is unique in that she also recounts her postwar life and the unexpected financial struggles she and her family experienced in the post-Reconstruction South. Nannie represents a generation of young women born into a society based on slavery but who faced mature adulthood in an entirely new world of decreasing farm values, increasing industrialization, and young women entering the workforce.--From publisher description.

Winterrules Oct 11 2020 Robert Eisenhauers
"Winterrules" focuses on the complex and ambivalent interrelation between lived experience (autobiography) and cultural memory. "Winterrules," prompted by the old question, 'What purpose does poetry serve in an age deprived of poetic sensibility?' seeks to situate the authors personal experience within a field of cross-cultural reference, responding to aspects of the Western and Far Eastern cultural heritage, as well as scenes from contemporary life. "Winterrules" enlivens the reading experience through vivid, sometimes jarring juxtapositions, such as Tinker Toys in outer space or Dantes vision of hell. Eisenhauers wide-ranging travels are reflected in vignettes taken from the hard roads and wild coasts of North America, Europe, Mexico and the Greek Isles. While the dominant mood is serious, the poetic texts gathered here often approach their

subjects with an objectivity combining clinical attachment with light-hearted engagement. As sailor, biker, teacher, translator and scholar, Eisenhower takes the reader on a memorable voyage.

Blade-Mounted Trailing Edge Flap Control for Bvi Noise Reduction Feb 12 2021

Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to alleviate the interaction. Results for various time dependent

flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power penalties on the order of 18 pct. for a four bladed rotor and 58 pct. for a two bladed rotor were obtained.

Irishness and Womanhood in Nineteenth-century British Writing May 18 2021 Using Lady Morgan's *The Wild Irish Girl* as his point of departure, Thomas J. Tracy argues that nineteenth-century debates over what constitutes British national identity often

revolved around representations of Irishness, especially Irish womanhood. He maps the genealogy of this development in fiction, political discourse, and the popular press, from Edgeworth's *Castle Rackrent* through Trollope's Irish novels, focusing on the pivotal period from 1806 through the 1870s.

[Refinement of Production Engines and New](#)

Control Strategies Nov 04 2022 This collection is a resource for studying the history of the evolving technologies that have contributed to snowmobiles becoming cleaner and quieter machines. Papers address design for a snowmobile using the EPA test procedure and standard for off-road vehicles, along with more stringent U.S. National Park Best Available Technology (BAT) standards that are likened to those of the California Air Resourced Board (CARB). Innovative technology solutions include:

- Standard application for diesel engine designs
- Applications to address and test both engine and track noise
- Benefits of the Miller cycle and turbocharging

The SAE International Clean Snowmobile Challenge (CSC) program is an engineering design competition. The program provides undergraduate and graduate students the opportunity to enhance their engineering design and project management skills by reengineering a snowmobile to reduce emissions and noise. The competition includes internal

combustion engine categories that address both gasoline and diesel, as well as the zero emissions category in which range and draw bar performance are measured. The goal of the competition is designing a cleaner and quieter snowmobile. The competitors' modified snowmobiles are also expected to be cost-effective and comfortable for the operator to drive.
