**Why Knowledge Matters** Sep 03 2022

In Why Knowledge Matters, influential scholar E. D. Hirsch, Jr., addresses critical issues in contemporary education reform and shows how cherished truisms about education and child development have led to unintended and negative consequences. Hirsch, author of The Knowledge Deficit, draws on recent findings in neuroscience and data from France to provide new evidence for the argument that a carefully planned, knowledge-based elementary curriculum is essential to providing the foundations for children's life success and ensuring equal opportunity for

students of all backgrounds. In the absence of a clear, common curriculum, Hirsch contends that tests are reduced to measuring skills rather than content, and that students from disadvantaged backgrounds cannot develop the knowledge base to support high achievement. Hirsch advocates for updated policies based on a set of ideas that are consistent with current cognitive science, developmental psychology, and social science. The book focuses on six persistent problems of recent US education: the over-testing of students; the scapegoating of teachers; the fadeout of preschool gains; the narrowing of the curriculum; the continued achievement gap between demographic groups; and the reliance on standards that are not linked to a rigorous curriculum. Hirsch examines evidence from the United States and other nations that a coherent, knowledge-based approach to schooling has improved both achievement and equity wherever it has been

instituted, supporting the argument that the most significant education reform and force for equality of opportunity and greater social cohesion is the reform of fundamental educational ideas. *Why Knowledge Matters* introduces a new generation of American educators to Hirsch's astute and passionate analysis. *Organizational Learning and Knowledge: Concepts, Methodologies, Tools and Applications* Nov 24 2021 *Organizational Learning and Knowledge: Concepts, Methodologies, Tools and Applications* demonstrates exhaustively the many applications, issues, and techniques applied to the science of recording, categorizing, using and learning from the experiences and expertise acquired by the modern organization. Business, Entrepreneurship and Innovation Toward Poverty Reduction Apr 17 2021 Ways in which poverty can be reduced in both countries and regions through business, entrepreneurship and government has been a hot issue for researchers and policymakers in recent years. Governments can play an important role in helping the poor people by non-profit

organizations and others that help to seed business among the poor. Businesses increasingly also see the large number of people in severe poverty not only as an issue for social concern, but also as a potentially large untapped market of consumers for goods and services. Some scholars have called for poverty reduction through entrepreneurship owing to the fact that it can be an efficient path to also change the poor's attitudes and behaviours from a passive mode, to a more active mode towards poverty reduction economically and socially. In addition, the sharing economy brings opportunities where everyone is a micro-entrepreneur. There is a recognition that these types of entrepreneurship above could offer the greatest single potential means to move individuals out of poverty in the nations and regions in the next 5-10 years. This book provides new and valuable analyses of poverty and business, entrepreneurship and innovation in current nations

and regions including developing and developed countries. As business, entrepreneurship and innovation can help to generate greater business activity in settings of severe poverty, they will help to solve poverty, as individuals in severe poverty are able to both generate greater incomes and accumulate greater assets as they participate with large firms in those activities. The chapters in this book were originally published as a special issue of the Entrepreneurship & Regional Development.

Actionable tools, processes and metrics for successfully managing innovation projects

Conventional project management methods are oftentimes insufficient for managing innovation projects.

Innovation is lost under the pre-determined scope and forecasted environments of traditional project

Digital Literacy and Carsten Herrmann-Pillath's *The Economics of Identity and Creativity*, leading American academic Richard E Lee's *Knowledge Matters* is the latest in this innovative series featuring international scholars and thinkers at the forefront of the creative industries. We face a long-term structural crisis in how we understand our world. With the rise of capitalism came structures of knowledge that divided 'facts' (sciences) from 'values' (humanities), but these divisions have become unsustainable in today's society - as shown by Australia's ongoing history wars. Lee argues that both knowledge and its structures form an inseparable whole, which governs what actions people will take. *Knowledge Matters* is a crucial step towards solving the structural crisis and helping us imagine and evaluate our possible futures. *Experimental Games* Oct 24 2021 In our unprecedentedly networked world, games have come to occupy an important space in many of our everyday

lives. Digital games alone engage an estimated 2.5 billion people worldwide as of 2020, and other forms of gaming, such as board games, role playing, escape rooms, and puzzles, command an ever-expanding audience. At the same time, “gamification”—the application of game mechanics to traditionally nongame spheres, such as personal health and fitness, shopping, habit tracking, and more—has imposed unprecedented levels of competition, repetition, and quantification on daily life. Drawing from his own experience as a game designer, Patrick Jagoda argues that games need not be synonymous with gamification. He studies experimental games that intervene in the neoliberal project from the inside out, examining a broad variety of mainstream and independent games, including StarCraft, Candy Crush Saga, Stardew Valley, Dys4ia, Braid, and Undertale. Beyond a diagnosis of gamification, Jagoda imagines ways that games can be experimental—not only in

the sense of problem solving, but also the more nuanced notion of problem making that embraces the complexities of our digital present. The result is a game-changing book on the sociopolitical potential of this form of mass entertainment. Knowledge Matters Aug 02

2022 Higher education can be a vital public good, providing opportunities for students, informed citizens for democracy, and knowledge to improve the human condition. Yet public investment in universities is widely being cut, often because public purposes are neglected while private benefits dominate. In this collection, international scholars confront the realities of higher education and the future of its public and private agenda. Their perspectives illuminate the trajectory of education in the twenty-first century and the continuing importance of the university's public mission. Reporting from Asia, Africa, Europe, Latin America, and North America, these scholars look at the different ways universities struggle to serve public and private agendas. Contributors examine the implications of changes in funding sources as well as amounts, different administrative and policy decisions, and the significance of various approaches to

assessment and evaluation. They ask whether wider student access has in fact resulted in social mobility, whether more scientific research can be treated as an open-access resource, how changes in academic publishing change access to knowledge, and whether universities get full value from research sold to private corporations. At the same time, these chapters capture the confusion in the university sector over explaining academic work to a broader public and prioritizing its multiple purposes. Authors examine these practical challenges and the implications of different approaches in different contexts.

*Non-Cognitive Factors and Learning Within a Business Simulation* Aug 22 2021

Serious games can provide a convenient and straightforward access to complex knowledge for all age groups. However, learning achievements depend largely on learners' non-cognitive factor disposition. With the aim of combining the fields of serious games and non-cognitive factors, this research focuses on the use of a business simulation which conveys change management insights. Business simulations are a subset of serious games

and are perceived as a non-traditional learning method. The objectives of this work are versatile: (1) developing a scale, which measures learners' knowledge and skills increase gained from a business simulation, (2) investigating the effects of non-cognitive factors on learning in this business simulation environment and (3) exploring the moderating role of team preference in this type of learning setting. Using the newly developed scale, this work finds that learners' skills and knowledge states are more pronounced after playing the business simulation. About the author Tanja Kreitenweis is responsible for digital transformation topics in HR at a service company. She was a research assistant at the Universität der Bundeswehr München from 2016 to 2020. During her doctorate, she conducted research in the areas of serious gaming, learning and leadership at the Faculty of Business Administration and the Rady School of Management at the

University of California San Diego. At the same time, she accompanied and advised

companies on matters of change management and communication.
