Spray Drift Management Apr 17 2021 This practical guide focuses on managing the risks of spray drift and includes information on appropriate handling practices to ensure a safe workplace.

Pesticide Regulation Handbook Oct 24 2021 Pesticide handlers have never had an easy time keeping abreast of the regulations that affect them, but it is getting even more difficult as public pressure adds more layers of new rules. At the same time, there's a trend toward making the individual applicant more responsible for knowing the rules and for getting more training. This is the only volume that, in clear language, describes the system, the current issues in regulation, and the science behind them for the user. It can be helpful for the beginner, the veteran, or anyone who needs a reference encompassing the entire range of pesticide regulatory issues, such as groundwater, endangered species, recordkeeping, worker protection, and more. There's also an exclusive, first-ever compilation of the rules in all 50 states and the District of Columbia for the training and testing required to become a certified applicator-something that varies considerably from state to state.

Guidelines for personal protection when handling and applying pesticides Apr 29 2022 These guidelines are intended to provide guidance on pesticide risk reduction through reduced exposure by effective personal protection with special attention to the use of Personal Protective Equipment (PPE). First, they provide technical information on personal protection and on the selection and use of PPE. Second, in line with the FAO/WHO International Code of Conduct on Pesticide Management, they address policy issues and recommend measures to improve personal protection and specifically the use and availability of adequate quality and affordable PPE. They are primarily aimed at government authorities in charge of pesticide management and risk reduction, but are also considered useful to public and private sectors such as pesticide industry, non-governmental organisations (NGO) and other relevant entities. More specifically, these guidelines are targeted at stakeholders in low and middle income countries (LMICs) where it is acknowledged that there is limited legislation, compliance and enforcement, and PPE availability. These Guidelines were developed by the FAO/WHO Joint Meeting on Pesticide Management (JMPM) to provide guidance on provisions in the Code of Conduct on Pesticide Management that are related to personal protection of pesticide users. They are meant to enhance current national legislation and regulations on personal protection and personal protective equipment (PPE) or where there is none, to provide guidance. They reflect the FAO/WHO joint approach on pesticide management, thus addressing personal protection of both agricultural and public health operators/applicators, the latter being engaged in using insecticides for vector control.
