Medical Anthropology Sep 09 2020 Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

Innovation Management and New Product Development Aug 09 2020 Revised edition of the author's Innovation management and new product development, 2012.

The Future of Technology Jun 18 2021 From the industrial revolution to the railway age, through the era of electrification, the advent of mass production, and finally to the information age, the same pattern keeps repeating itself. An exciting, vibrant phase of innovation and financial speculation is followed by a crash, after which begins a longer, more stately period during which the technology is actually deployed properly. This collection of surveys and articles from *The Economist* examines how far technology has come and where it is heading. Part one looks at topics such as the "greying" (maturing) of IT, the growing importance of security, the rise of outsourcing, and the challenge of complexity, all of which have more to do with implementation than innovation. Part two looks at the shift from corporate computing towards consumer technology, whereby new technologies now appear first in consumer gadgets such as mobile phones. Topics covered will include the emergence of the mobile phone as the "digital Swiss Army knife"; the rise of digital cameras, which now outsell film-based ones; the growing size and importance of the games industry and its ever-closer links with other more traditional parts of the entertainment industry; and the social impact of technologies such as text messaging, Wi-Fi, and camera phones. Part three considers which technology will lead the next great phase of technological disruption and focuses on biotechnology, energy technology, and nanotechnology.

The Future of Museums Apr 16 2021 This book explores—at the macro, meso and micro levels and in terms of qualitative as well as quantitative studies—the current and future role of museums for art and society. Given the dynamic developments in art and society, museums need to change in order to remain (and in some ways, regain) relevance. This relevance is in the sense of a power to influence. Additionally museums have challenges that arise in the production of art through the use of permanent and rapidly changing technologies. This book examines how museums deal with the increasing importance of performance art and social interactive art, artistic disciplines which refuse to use classical or digital artistic media in their artistic processes. The book also observes how museums are adapting in the digital age. It addresses such questions as, "How to keep museums in contact with recipients of art in a world in which the patterns of communication and perception have changed dramatically," and also "Can the art museum, as a real place, be a counterpart in a virtualized and digitalized society or will museums need to virtualize and even globalize themselves virtually?" Chapters also cover topics such as the merits of digital technologies in museums and how visitors perceive these changes and innovations. When you go back to the etymological origin, the Mouseion of Alexandria, it was a place where - supported by the knowledge stored there - art and science were developed: a place of interdisciplinary research and networking, as you would call it today. The word from the Ancient Hellenic language for museum (ΜΟΥΣΕΙΟΝ) means the "house of the muses": where the arts and sciences find their berth and cradle. With the "Wunderkammer," the museum was re-invented as a place for amazing for purpose of representation of dynastic power, followed by the establishment of museums as a demonstration of bourgeois self-consciousness. In the twentieth century, the ideal of the museum as an institution for education received a strong boost, before the museum as a tourism infrastructure became more and more the institutional, economic and political role-model. This book is interested in discovering what is next for museums and how these developments will affect art and society. Each of the chapters are written by academics in the field, but also by curators and directors of major museums and art institutions.
