Psychosocial Resilience and Risk in the Perinatal Period Aug 07 2020 Bringing together experts in the field, this important book considers the underlying risk factors that create situations of psychosocial vulnerability and marginalisation for mothers, from their baby's conception up to a year after birth. Adopting a strengths-based approach, the book looks not only at the incidence and impact of disadvantageous circumstances on women but also explores protective factors at an individual, family, community and service level. It identifies promising evidence-based interventions and sources of resilience. With a distinctive focus on social and cultural diversity, Psychosocial Resilience and Risk in the Perinatal Period considers a wide range of personal circumstances and social groups, including women's experiences of traumatic birth, domestic and family violence, drug and alcohol use and mothering by indigenous, same-sex and disabled women. Throughout, case studies and service user experiences are used to illuminate the issues and illustrate exemplary care practice. International in scope, this book is particularly strong on the implications for care practices and health service delivery within Western models of maternity care. Its applied focus and evidence base makes it eminently suitable for study purposes and professional reference. Of relevance to midwives, health visitors and other health and social care practitioners, Psychosocial Resilience and Risk in the Perinatal Period's final chapters focus on developing resilience amongst professionals and multiprofessional and interagency working.

Fetal and Neonatal Lung Development Sep 07 2020 Lung disease affects more than 600 million people worldwide. While some of these lung diseases have an obvious developmental component, there is growing appreciation that processes and pathways critical for normal lung development are also important for postnatal tissue homeostasis and are dysregulated in lung disease. This book provides an authoritative review of fetal and neonatal lung development and is designed to provide a diverse group of scientists, spanning the basic to clinical research spectrum, with the latest developments on the cellular and molecular mechanisms of normal lung development and injury-repair processes, and how they are dysregulated in disease. The book covers genetics, omics, and systems biology as well as new imaging techniques that are transforming studies of lung development. The reader will learn where the field of lung development has been, where it is presently, and where it is going in order to improve outcomes for patients with common and rare lung diseases.

Pioneers in Neonatal/Perinatal Medicine Jan 30 2020 From the files of "NeoReviews" comes this collection of Perinatal Profiles, chosen to provide a glimpse into the lives of the movers and shakers in neonatal/perinatal medicine Many of the profiles in this collection were written by the students of these pioneers who have gone on to become key NPM innovators themselves. They provide rare insight into the personalities of their mentors and the development of NPM. You'll meet such luminaries as: Alex Minkowski, MD, whose life's work, including a conference on whether assisted ventilation did more harm than good, led French President Jacques Chirac in 2004 to call him one of the consciences of the 20th century. Martin Couney, MD, who in 1896 began 40 years of organizing preterm baby child hatchery sideshows to showcase the marvels of incubator technology at expositions, state fairs, traveling circuses even Coney Island showing the public that even the most severely preterm infants had a chance for survival. Elizabeth Blackwell, Marie Putnam Jacobi, Elizabeth Garret, and Madeleine Bres, the first female physicians caring for women and children at the end of the 19th century. All struggled for admission to medical school yet eventually managed to pierce the armor of sex bias. Ignac Fulop Semmelweis, the Hungarian pioneer of antiseptics who first demonstrated that most childbed fever cases could be prevented one of the most important discoveries of 19th-century medicine yet was ridiculed and released in disgrace from his Viennese hospital and medical school faculty posts. Cathy Cropley, the Seattle nurse who wove nurses into the fabric of neonatal resuscitation as team members and instructors, insisting that skill take precedence over title. This collection of 26 key columns was compiled and edited by NeoReviews Editor-in-Chief Alistair G.S. Philip, MD, FRCPE, FAAP, in honor of the 15th anniversary of "NeoReviews," the American Academy of Pediatrics online journal of neonatology, available at <http://www.neoreviews.org>.

Neonatal Imaging Oct 09 2020 Neonates may be affected by a wide variety of conditions, ranging from prematurity to congenital anomalies to acquired illnesses. Each of these vulnerable infants require a heightened level of evaluation and care, in which imaging plays a vital role. Multiple imaging examinations are often necessary to aid in diagnosis and help guide clinical management. The purpose of this book is to provide a better understanding of the basics of imaging and the language of radiology to aid clinicians in the evaluation of neonates. Neonatal Imaging places particular emphasis on radiography and sonography, two of the principle imaging modalities used in everyday neonatal care. A sound appreciation of why images look the way they do will help readers learn how to recognize abnormalities independently and gain a deeper understanding of the diagnostic workups of sick infants. Neonatal Imaging presents many excellent examples of imaging studies you can expect to see in a neonatal intensive care unit or a newborn nursery. Although we discuss basic imaging principles, this book is not an exhaustive review of the subject and does not cover many important topics that are beyond its scope. Therefore, be sure to consult your institution's radiologists to confirm any findings you discover, if you have questions regarding the appropriate utilization of imaging, and in complex cases.

Avery & MacDonald's Neonatology Nov 21 2021 For more than 45 years, Avery & MacDonald's Neonatology has been the premier text on the pathophysiology and management of both preterm and full-term neonates, trusted by neonatologists, neonatology fellows, pediatricians, neonatal nurse practitioners, and ob/gyn practitioners worldwide. Continuing the tradition of excellence established by Drs. Gordon B. Avery and Mhairi G. MacDonald, this fully revised eighth edition features three new lead editors, numerous new chapters, reorganized and updated content, and an increased focus on global neonatology.

Neonatal Hematology Oct 28 2019 Neonatal hematology is a fast-growing field, and the majority of sick neonates will develop hematological problems. This is an essential guide to the pathogenesis, diagnosis and management of hematologic problems in the neonate. Guidance is practical, including blood test interpretation,

advice on transfusions and reference ranges for hematological values. Chapters have been thoroughly revised according to the latest advances in the field for this updated third edition. Topics discussed include erythrocyte disorders, platelet disorders, leukocyte disorders, immunologic disorders and hemostatic disorders. Coverage of oncological issues has been expanded to two separate chapters on leukemia and solid tumors, making information more easily accessible. Approaches to identifying the cause of anemia in a neonate are explained, with detailed algorithms provided to aid clinicians in practice. Covering an important hematologic niche with an ever increasing amount of specialized knowledge, this book is a valuable resource for hematologists, neonatologists and pediatricians.

Neonatal Advanced Practice Nursing Apr 14 2021 A strikingly effective, one-of-a-kind learning resource This one-of-a-kind learning resource for neonatal nurse practitioner/clinical nurse specialist students in both academic and clinical settings uses complex case studies to reinforce the best practices in treating vulnerable neonatal patients. Based on applications and outcomes, the case study approach develops critical thinking and clinical decision making and fosters effective role transition in practice-based disciplines. Authored by leading neonatal nurse practitioner (NNP) educators nationwide, these multifaceted, unfolding case studies address and synthesize the most important content covered throughout the NNP curriculum. Additional audiences for this book include interprofessional staff working in Level II and Level III nursery settings. Beginning with case studies for identifying maternal risk factors, and culminating in case studies for communicating with parents, this text shows a holistic view of caring for neonatal patients. Chapters organized by body system address diseases and disorders and prompt the reader for diagnosis and treatment. Progressing from basic to complex, case studies include objectives, clinical pearls, and critical thinking questions. A robust instructor tool kit contains pedagogical strategies for facilitating online discussion, chapter conclusion quizzes, a variety of simulation experiences, and more. **Key Features:** Uses a complex case-based learning approach for neonatal advanced practice nursing-the first book to do so Authored by leading NNP educators nationwide Provides case studies synthesizing key content areas Helps prepare students for effective role transition Includes a robust instructor toolkit and can be used in online courses

Parent-Baby Attachment in Premature Infants (Psychology Revivals) May 04 2020 Originally published in 1983, in the two decades prior to publication, specialised neonatal units for the treatment of sick or preterm babies had been set up in most major neonatal centres. In the early years these units did little to prevent separation of parents and babies and evidence accumulated of the ill effects of this situation. In addition, we had gradually become aware of the difficulties of building a relationship with a sick or immature baby even under more ideal circumstances. This book, in a series of authoritative review chapters, sets out to describe the process by which social relationships develop after birth and the ways in which this process may be distorted by separation, the condition of the baby or by the process of medical treatment. Experienced practitioners describe practical steps which may be taken to support parents and foster their relationship with their babies in treatment situations. The final section of the book examines the organisation of neonatal care in a number of widely different settings and indicates that diverse approaches may be successful in achieving the same ends.

Neonatal-perinatal Medicine Jun 28 2022 This 2-volume "bible" of neonatology has been exhaustively updated to reflect all of the sweeping developments that have recently occurred in neonatal-perinatal medicine. There is an enhanced focus on evidence-based medicine, and all the material incorporated has been taken from the most recent clinical trials. With a stronger, and 25% brand new author team, this book is set to provide you with full and relevant coverage of all the issues facing neonatal-perinatal medicine to date. Examines new non-invasive monitoring systems such as transcutaneous glucose monitoring, infrared blood flow monitoring, magnetic resonance spectroscopy, new MR brain imaging techniques, and near-infrared spectroscopy and optical imaging. Incorporates brand-new material on the history of neonatology...medical and surgical treatment of the fetus...and practicing evidence-based neonatal/perinatal medicine. Contains new material on high-frequency ventilation and cutting-edge guidelines for managing a micropremie. Explores how recent advances in genetics have expanded the options for testing and treating various disorders. Offers added coverage on the management of neonatal ventilation. Features a new chapter stressing collaboration between neonatologists, perinatologists, and obstetricians. Delivers an enhanced focus on evidence-based medicine. Presents increased information on databases used for the evaluation of outcomes in neonatal medicine. Provides all-new references to reflect the most recent sources in the literature...many new and updated case studies...and numerous brand-new illustrations and tables.

Maternal-Fetal Evidence Based Guidelines Jun 04 2020 This new edition of an acclaimed text reviews the evidence for best practice in Maternal-Fetal Medicine, to present the reader with the right information, with appropriate use of proven interventions and avoidance of ineffectual or harmful ones. The information is presented in the right format by summarizing evidence succinctly and clearly in tables and algorithms. The aim is to inform the clinician, to reduce errors and "to make it easy to do it right." The volume can be purchased separately or together with the companion volume on Obstetric Evidence Based Guidelines (set ISBN 9780367567033). The Series in Maternal-Fetal Medicine is published in conjunction with the Journal of Maternal-Fetal and Neonatal Medicine. From reviews of previous editions: An excellent resource with quick and easy protocols... this book has a permanent spot on my shelf. —Doody's Review Service

Common Problems in the Newborn Nursery Dec 31 2019 This comprehensive book thoroughly addresses common clinical challenges in newborns, providing an evidence-based, step-by-step approach for their diagnosis and management. Common Problems in the Newborn Nursery is designed to be an easy-to-use, practical guide, covering a full range of clinical dilemmas: bacterial and viral infections, jaundice, hypoglycemia, hypotonia, nursery arrhythmia, developmental dysplasia of the hips, newborn feeding, cardiac problems, late preterm infants, dermatology, anemia, birth injuries, ocular issues, as well as hearing assessments in the newborn. Written by experts in their fields, each chapter begins with a clinical case presentation, followed by a discussion of potential treatment and management decisions and various differential diagnosis. Correct responses will then be explained and supported by evidence-based literature, teaching readers how to discern the normal from the abnormal, the emergent from the non-emergent, and how to make decisions concerning diagnosis encountered on a daily basis. While this guide is directed towards health care providers such as pediatricians, primary care physicians, and nurse practitioners who treat newborns in the general nursery, this book will also serve as a useful resource for anyone interested in working with this vulnerable patient population, from nursing and medical students, to nurses, and residents in pediatrics or family practice.

Selected Topics in Neonatal Care Mar 02 2020 Neonatology is one of the areas of greatest development and evolution within pediatrics. The technoscientific advances in this area have led to an increase in the survival of premature infants who sometimes require sophisticated care. However, there is essential care that must be included in all centers that care for high-risk babies. This book includes important topics related to neonatal care grouped into four sections. In 14 chapters that address relevant issues about neonatal care, the book seeks to contribute to the clinical work of the health teams of neonatal units. Specialists in the field of neonatology from different countries have developed these chapters and through them they hope to share part of their experience.

Rudolph's Brief Atlas of the Newborn Jan 12 2021 The late Arnold J. Rudolph, MD was the most meticulous photographic archivist in all of neonatology. In a practice spanning forty years, Dr. Rudolph collected photographs of virtually every disease, disorder, and condition affecting the newborn. This material has been published in a five-volume masterwork, from which this Brief Atlas has been derived. In this new book, colleagues of Dr. Rudolph have assembled a representative sampling of the most common disorders of the newborn in a compact, economical format. The major sections cover neonatal-perinatal medicine, musculoskeletal disorders and congenital deformities, and problems of the head, neck, eye and central nervous system. Dermatology and perinatal infections are addressed, followed by systemic problems encountered by newborns.
