On Fuzziness Aug 07 2020 The notion of Fuzziness stands as one of the really new concepts that have recently enriched the world of Science. Science grows not only through technical and formal advances on one side and useful applications on the other side, but also as consequence of the introduction and assimilation of new concepts in its corpus. These, in turn, produce new developments and applications. And this is what Fuzziness, one of the few new concepts arisen in the XX Century, has been doing so far. This book aims at paying homage to Professor Lotfi A. Zadeh, the "father of fuzzy logic" and also at giving credit to his exceptional work and personality. In a way, this is reflected in the variety of contributions collected in the book. In some of them the authors chose to speak of personal meetings with Lotfi; in others, they discussed how certain papers of Zadeh were able to open for them a new research horizon. Some contributions documented results obtained from the author/s after taking inspiration from a particular idea of Zadeh, thus implicitly acknowledging him. Finally, there are contributions of several "third generation fuzzysists or softies" who were firstly led into the world of Fuzziness by a disciple of Lotfi Zadeh, who, following his example, took care of opening for them a new road in science. Rudolf Seising is Adjoint Researcher at the European Centre for Soft Computing in Mieres, Asturias (Spain). Helena, Or, The Sea in Summer May 28 2022 First English translation of a 1952 Spanish masterpiece by an award-winning translator, this Spanish classic evokes the childhood transition to adolescence. .."Aunt Josefina's fat white legs under the water; a child standing on a grown-up's shoulders and plunging into the waves; eating lunch on the beach, the food gritty with sand; a late afternoon swim in the delicious water; getting changed behind the rocks, shivering in the suddenly cold wind; then walking home singing and picking sun-warm blackberries"

Trifariam, the Lost Codex Jul 30 2022 Do you want to watch the awesome booktrailer? Write this on your web browser <http://www.amazon.com/Diego-Rodriguez/e/BOOFRR00T2> Do we know, or think we know, the truth about all those mysteries which surround us? Why does our society take so much time to evolve? Do secret organizations really hold so much influence? Do you want to know the truth? 1497 AD Simone Di Benedetto is abbot of the Campanile Monastery and the last Grand Master of a secret society which was founded in back in the age of Ancient Egypt. He produces a manuscript which contains all the knowledge inherited from his ancestors and hands it over, together with a set of very precise instructions, to a monk before being brutally murdered. He claims that the book hides the last remains of an ancient secret that will save us from the coming apocalypse, but whose very existence would shake up the uppermost echelons of power. Five hundred years later, James Oldrich, expert in History of Art and the future president of Columbia University, discovers an old book with a chilling symbol on the cover. It is written in an unfathomable language, and the manner in which it has been hidden is even more baffling. With the help of Mary, a professional archaeologist, and his inseparable friend Richard, a world-renowned paleographer, he soon becomes embroiled in a thrilling adventure which will take them to the most mysterious places on Earth. A race against time begins when they discover messages hidden in the brilliant works of Michelangelo, in the walls of one of the most significant archbasilicas in Rome, and in the heart of Washington, the Masonic city par excellence. They will need all to use all their ingenuity and knowledge to solve the puzzles that have been set for them, eventually leading them to unravel the best kept secrets of the pyramids of Giza and Teotihuacan, as well as the Bermuda Triangle, Stonehenge and Chichen Itza. They must try to slot together all the pieces of the jigsaw as quickly as possible, because they are not alone in their adventure. They must contend with two assassins on the payroll of the most influential secret organization on the planet, the members of which are the true owners of the world. They will have to hurry - the end of time is drawing ever closer.

Head and Neck Critical Illness Nov 21 2021 There are various malignant tumors in the head and neck area, including oral cavity, pharynx, sinonasal cavity, and salivary glands. Squamous cell carcinoma is the most common cancer among head and neck cancers. In salivary glands, there are many types of malignancies that can develop, such as malignant lymphoma, adenoid cystic carcinoma, adenocarcinoma, and mesenchymal tumors. In a clinical setting, imaging, such as computed tomography (CT) and magnetic resonance imaging (MRI), is very important in terms of the prediction of the histological type and the evaluation of the extent of invasion of adjacent structures. In basic research, there are few animal models in head and neck malignancies. In this Special Issue, we broadly discuss the basic and clinical research in head and neck malignancies.

Sacred Blood, Sacred Image Oct 01 2022 Revised Edition This is the story of the Sudarium of Oviedo, an ancient bloodstained cloth, believed to have covered the head of Jesus of Nazareth after his crucifixion. The author traces the known history of the linen and presents the up-to-date conclusions of EDICES. The investigative team that has been studying the cloth since 1989, discusses the cultural significance of the crucifixion and blood in the context of first-century Jerusalem. They demonstrate the significance of the famous passage of John 20:5-7, as analyzed by some of the most important Biblical scholars of the world. The book contains twenty pages of color photographs, many of which are from EDICES. These photographs explain visually the bloodstains and wrinkles found on the cloth, how the cloth was used, its comparison with the Shroud of Turin and the historical odyssey from Jerusalem to Spain.

The Spanish Coastal Systems Feb 22 2022 This monograph presents the state of art of the geologic knowledge about the Spanish coast obtained through scientific research in the last 30 years. From a general point of view, coasts are the most quickly changing systems of the Earth. This is critical, since many human resources, such as the main part of economic and social activities, are located in the coastal areas. Especially in the case of Spain these coasts include cities, wide industrial areas (including harbor complexes), important ecologic systems, and our main economic resource: tourism. Understanding the dynamic functioning of each element of this coast is vital for correct future coastal management, so as to solve problems derived from bad plans developed in the last decades of the twentieth century. This is a valuable text for advanced graduate students and coastal researchers, which connects the specific dynamic functioning of the main Spanish coastal environments and their relationships with human activities.

Diabetes: A Multidisciplinary Approach Mar 14 2021 Diabetes: A Multidisciplinary Approach Diabetes refers to the linkage of both diabetes and obesity that results in the coexistence of these 2 conditions. Research has identified pathophysiological mechanisms revolving around insulin resistance and hyperinsulinemia. Diabetes has important diagnostic and therapeutic implications. This book is a multidisciplinary review of diabetes. It highlights the various pharmacological methods of managing the condition. The book presents 10 chapters contributed by more than 40 experts from around the world. The review starts with an overview of diabetes and progressively describes the relationships of diabetes with the choice of diets and psychological factors. The chapters then cover the role of adipokines as therapeutic biomarkers before presenting research on medicinal and nutritional approaches to treat the condition. Modern approaches to diabetes treatment such as the use of new bioactive phytochemicals, mitigating meta-inflammation and laboratory techniques are also reviewed in the book. Diabetes: A Multidisciplinary Approach is a timely reference for clinicians (in endocrinology and family medicine subspecialties) and students of pharmacology and medicinal chemistry on the intricate relationship between diabetes and obesity.

Caliphs and Kings Nov 09 2020 CALIPHS AND KINGS: SPAIN, 796-1031 The last twenty-five years have seen a renaissance of research and writing on Spanish history. Caliphs and Kings offers a formidable synthesis of existing knowledge as well as an investigation into new historical thinking, perspectives, and methods. The nearly three-hundred-year rule of the Umayyad dynasty in Spain (756-1031) has been hailed by many as an era of unprecedented harmony and mutual tolerance between the three great religious faiths in the Iberian Peninsula – Christianity, Judaism, and Islam – the like of which has never been seen since. And yet, as this book demonstrates, historical reality defies the myth. Though the middle of the tenth century saw a flowering of artistic culture and sophistication in the Umayyad court and in the city of Córdoba, this period was all too short-lived and localized. Eventually, twenty years of civil war caused the implosion of the Umayyad regime. It is through the forces that divided – not united – the disparate elements in Spanish society that we may best glean its nature and its lessons. Caliphs and Kings is devoted to better understanding those circumstances, as historian Roger Collins takes a fresh look at certainties, both old and new, to strip ninth- and tenth-century Spain of its mythic narrative, revealing the more complex truth beneath.

Bone Health Aug 19 2021 This multidisciplinary book addresses three lines of evidence (medieval, contemporary, and epigenetic) regarding the effect of human socio-economic status on bone health. It provides an overview of the extent to which human social background affects adult bone quality and quantity, and makes recommendations for future skeletal biology research into lifestyle-related musculoskeletal disorders. The book is divided into three major parts, the first of which discusses bone and dental health in medieval human skeletal remains from distinct socio-economic status groups. In turn, Part 2 reviews bone health in contemporary human populations with a range of social backgrounds; in addition, a conceptual model proposing a social gradient of osteoporosis and fracture risk related to biological mechanisms and cumulative stressors throughout the human lifecycle is presented. Lastly, Part 3 highlights the role of epigenetics in socially patterned risk factors for skeletal disorders, and discusses how epigenetic mechanisms transduce the psychosocial environment and increase the risk of developing conditions such as osteoporosis. Overall, the book highlights the importance of considering the social-biological nexus in future skeletal biology research and future treatment of bone disease. Increased awareness of this nexus can potentially improve individual and population-level bone health interventions, reducing the social inequities observed in fracture risk. Given its scope, the book offers a valuable resource for researchers, academics, and students in the fields of medicine, epidemiology, the health sciences, biological anthropology, human anatomy and adaptation, developmental studies of human societies, human biology, and any field concerning musculoskeletal disorders and health. It will also benefit clinical practitioners evaluating osteoporosis, osteopenia, fracture risk, bone quality and quantity.

After the Carolingians Jan 30 2020 A volume that introduces new sources and offers fresh perspectives on a key era of transition, this book is of value to art historians and historians alike. From the dissolution of the Carolingian empire to the onset of the so-called 12th-century Renaissance, the transformative 10th–11th centuries witnessed the production of a significant number of illuminated manuscripts from present-day France, Belgium, Spain, and Italy, alongside the better-known works from Anglo-Saxon England and the Holy Roman Empire. While the hybrid styles evident in book painting reflect the movement and re-organization of people and codices, many of the manuscripts also display a highly creative engagement with the art of the past. Likewise, their handling of subject matter—whether common or new for book illumination—attests to vibrant artistic energy and innovation. On the basis of rarely studied scientific, religious, and literary manuscripts, the contributions in this volume address a range of issues, including the engagement of 10th–11th century bookmakers with their Carolingian and Antique legacies, the interwoven geographies of book production, and matters of modern politics and historiography that have shaped the study of this complex period. .

Travels Through History - Northern Spain Jul 26 2019 This book is a travelogue about the cities of northern Spain. I travelled to Pamplona, Burgos, San Sebastian, Valladolid, Segovia, Leon, Gijon, Oviedo, Santiago de Compostela, Pontevedra, A Coruna, and Vigo on board the fast, modern trains of the Spanish railways. I describe the history of these places along with the sights seen plus some food and drink options available to all. The cities range from the familiar such as Pamplona with its bull running and Leon with its world-famous cathedral to those not so well-known cities such as Pontevedra with its pedestrianised centre and A Coruna where I saw the world's oldest lighthouse. There are extra stories about two pilgrimages of my own - to see the modern architecture of Santiago Calatrava in Valencia and to watch Lionel Messi play football in Barcelona.

Painted Caves Oct 28 2019 Written from an archaeological perspective, Painted Caves is a beautifully illustrated introduction to the oldest art of Western Europe: the very ancient paintings found in caves. Behavioral Neurobiology of Suicide and Self Harm Sep 07 2020 This book reviews the recent research into biological aspects of suicide behavior and outlines each of the varied, recent approaches to prevent suicide. Suicidal behavior, perhaps, is the most complex behavior that combines biological, social, and psychological factors. A new frontier and new opportunities are opening with the technologies of data acquisition and data analysis. Personalized models based on digital phenotype could provide promising strategies for preventing suicide.
