**Knowledge Management Tools and Techniques** Mar 16 2021 Knowledge management (KM) - or the practice of using information and collaboration technologies and processes to capture organizational learning and thereby improve business performance - is becoming one of the key disciplines in management, especially in large companies. Many books, magazines, conferences, vendors, consultancies, Web sites, online communities and email lists have been formed around this concept. This practical book focuses on the vast offerings of KM solutions—technology, content, and services. The focus is not on technology details, but on how KM and IT practitioners actually use KM tools and techniques. Over twenty case studies describe the real story of choosing and implementing various KM tools and techniques, and experts analyse the trends in the evolution of these technologies and tools, along with opportunities and challenges facing companies harnessing them. Lessons from successes and failures are drawn, along with roadmaps for companies beginning or expanding their KM practice. The introductory chapter presents a taxonomy of KM tools, identifies IT implications of KM practices, highlights lessons learned, and provides tips and recommendations for companies using these tools. Relevant literature on KM practices and key findings of market research groups and industry consortia such as IDC, Gartner and APQC, are presented. The majority of the book is devoted to case studies, featuring clients and vendors along the entire spectrum of solutions: hardware (e.g. handheld/wearable devices), software (e.g. analytics, collaboration, document management) and content (e.g. newsfeeds, market research). Each chapter is structured along the "8Cs" framework developed by the author: connectivity, content, community, commerce, community, capacity, culture, cooperation and capital. In other words, each chapter addresses how appropriate KM tools and technologies help a company on specific fronts

such as fostering adequate employee access to knowledge bodies, user-friendly work-oriented content, communities of practice, a culture of knowledge, learning capacity, a spirit of cooperation, commercial and other incentives, and carefully measured capital investments and returns. Vendor history, product/service offerings, implementation details, client testimonials, ROI reports, and future trends are highlighted. Experts in the field then provide third-party analysis on trends in KM tools and technique areas, and recommendations for KM practitioners.

*Project Management Tools and Techniques* Feb 24 2022 Follow three project managers as they apply the 44 best project practices in different organizations. See how they adapt them to each organization and projects of differing sizes and scales. Chris Pimbock is a new project manager who works for a small rapidly growing startup. Their continuing growth, however, is slowed by customer service problems. Staff and resources are severely limited. Chris has to design a project to fix the problem without busting the budget. He needs to work with marketing people who are nearly hysterical over losing clients because of the customer service problems. They need better systems, more efficient facilities and streamlined operations. Projects are fairly new to the company and the sponsors, affected managers and the professional staff don't know the role they should play. Management also has a problem in setting priorities and sticking to them. Terrie Evans has her PMP and 5 years of experience in a medium-sized Midwest public corporation. Her company is also suffering from customer service problems that are causing customers to leave for smaller more agile competitors. Marketing blames Operations and fingers are pointed in many other directions so blame avoidance is a major issue. There is also significant money involved. Terri is already getting project change requests to add items cut from last year's budget plus other "goodies". Additionally, everyone's favorite vendors are wrestling for advantage in the upcoming competitive bidding. If that wasn't enough, Terrie also has problems building her team. Departments are hedging on committing to lend resources to the project. Worse many of the team members see themselves as representing the interests of their "home" departments rather than doing actual project work. Preston McCarthy is a senior project manager

(engagement manager) for an international consulting firm. He's managing a strategic project to improve customer service for a client's global operations. His team is composed of technical experts from Preston's firm and the client's employees. The latter are drawn from 5 countries, speak 3 different languages and have starkly different cultures. The client has twice tried to solve their customer service problems with solely internal teams. Both efforts failed miserably without fixing the problems. The top client executive will be retiring in a year and the VP's have already begun competing for the position. Everyone views customer service improvement project as either a prize or a target.
