[Child Protective Services](#) Jun 03 2020 From the Preface: This manual, Child Protective Services: A Guide for Caseworkers, examines the roles and responsibilities of child protective services (CPS) workers, who are at the forefront of every community's child protection efforts. The manual describes the basic stages of the CPS process and the steps necessary to accomplish each stage: intake, initial assessment or investigation, family assessment, case planning, service provision, evaluation of family progress, and case closure. Best practices and critical issues in casework practice are underscored throughout. The primary audience for this manual includes CPS caseworkers, supervisors, and administrators. State and local CPS agency trainers may use the manual for preservice or inservice training of CPS caseworkers, while schools of social work may add it to class reading lists to orient students to the field of child protection. In addition, other professionals and concerned community members may consult the manual for a greater understanding of the child protection process. This manual builds on the information presented in A Coordinated Response to Child Abuse and Neglect: The Foundation for Practice. Readers are encouraged to begin with that manual as it addresses important information on which CPS practice is based-including definitions of child maltreatment, risk factors, consequences, and the Federal and State basis for intervention. Some manuals in the series also may be of interest in understanding the roles of other professional groups in responding to child abuse and neglect, including: Substance abuse treatment providers; Domestic violence victim advocates; Educators; Law enforcement personnel. Other manuals address special issues, such as building partnerships and working with the courts on CPS cases.

[Registries for Evaluating Patient Outcomes](#) Nov 28 2019 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Addressing and Resolving Poor Performance Feb 21 2022 Most Federal employees work hard, and their performance is considered good or even exceptional. However, at times Federal supervisors are faced with employees whose performance is not acceptable. This purpose of this book, *Addressing and Resolving Poor Performance: A Guide for Supervisors*, is to help you address and resolve poor performance. This guidance should be used in concert with the technical advice you receive from your agency's human resources staff. You should also be aware that most agencies have specific procedures and requirements that must be followed, whether they are part of a negotiated bargaining agreement or other internal agency regulation. Addressing and resolving poor performance is a three-step process. These three steps are: 1) communicating expectations and performance problems; 2) providing an opportunity to improve; and 3) taking action. This booklet is organized accordingly into three steps. At the end of each section, you will find a checklist as well as answers to commonly asked questions. In the appendix, you will find samples of documents that can be used throughout this process. Dealing with performance problems is a real challenge for any supervisor. Experienced supervisors often say it is one of the toughest parts of their jobs. Nevertheless, it is a key supervisory responsibility, and failure to address poor performance can have a greater impact than you may appreciate. Some of the reasons supervisors often give for not addressing poor performance include: dealing with poor performance can be time consuming; if action is taken against an employee, it will lower morale among other employees and create a less productive work environment; telling employees that they are not performing satisfactorily is unpleasant and requires special human relations skills; the procedural steps involved in addressing poor performance are complex and highly technical; if a formal performance-based action is taken, it is likely to be appealed and ultimately overturned; and upper management will not support the action taken to address poor performance. The focus of this booklet is to help supervisors address and resolve poor performance. The best way for supervisors to handle poor performance issues is to take action to avoid performance problems before they occur.~
