Explaining European Identity Formation Aug 07 2020 What makes people identify with Europe? To answer this question, this book analyzes the development and determinants of a common European identity among EU citizens from the Maastricht Treaty in 1992 to the recent financial and economic crisis. The author examines citizens' identification with Europe for all EU member states, and systematically explores the theoretical and empirical implications of two turning points in the recent history of EU integration, namely the EU's enlargement to Central and Eastern Europe in 2004/2007 and the financial and economic crisis that started in 2008. The book integrates theoretical approaches to European identity in sociology, social-psychology and EU public opinion research in a comprehensive model for explaining individual identification with Europe. The empirical analysis employs a multilevel framework to systematically assess the influence of individual characteristics and the political, economic, and social context on citizens' feelings of identity. The long analysis period spanning from 1992 to the present allows inferences to be drawn about the long-term developments in the sources of European identification as well as the immediate impact of EU enlargement and the crisis on the determinants of European identification.

Developing and Maintaining Emergency Operations Plans: Comprehensive Preparedness Guide (CPG) 101, Version 2. 0 Jul 06 2020 Comprehensive Preparedness Guide (CPG) 101 provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOP). CPG 101 shows that EOPs are connected to planning efforts in the areas of prevention, protection, response, recovery, and mitigation. Version 2.0 of this Guide expands on these fundamentals and encourages emergency and homeland security managers to engage the whole community in addressing all risks that might impact their jurisdictions. While

CPG 101 maintains its link to previous guidance, it also reflects the reality of the current operational planning environment. This Guide integrates key concepts from national preparedness policies and doctrines, as well as lessons learned from disasters, major incidents, national assessments, and grant programs. CPG 101 provides methods for planners to: Conduct community-based planning that engages the whole community by using a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process; Ensure plans are developed through an analysis of risk; Identify operational assumptions and resource demands; Prioritize plans and planning efforts to support their seamless transition from development to execution for any threat or hazard; Integrate and synchronize efforts across all levels of government. CPG 101 incorporates the following concepts from operational planning research and day-to-day experience: The process of planning is just as important as the resulting document; Plans are not scripts followed to the letter, but are flexible and adaptable to the actual situation; Effective plans convey the goals and objectives of the intended operation and the actions needed to achieve them. Successful operations occur when organizations know their roles, understand how they fit into the overall plan, and are able to execute the plan. Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in

thinking through the life cycle of a potential crisis, determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain. Planners achieve unity of purpose through coordination and integration of plans across all levels of government, nongovernmental organizations, the private sector, and individuals and families. This supports the fundamental principle that, in many situations, emergency management and homeland security operations start at the local level and expand to include Federal, state, territorial, tribal, regional, and private sector assets as the affected jurisdiction requires additional resources and capabilities. A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective, and makes plan maintenance easier.

Data Abstraction and Pattern Identification in Time-series Data Jun 04 2020 Data sources such as simulations, sensor networks across many application domains generate large volumes of time-series data which exhibit characteristics that evolve over time. Visual data analysis methods can help us in exploring and understanding the underlying patterns present in time-series data

but, due to their ever-increasing size, the visual data analysis process can become complex. Large data sets can be handled using data abstraction techniques by transforming the raw data into a simpler format while, at the same time, preserving significant features that are important for the user. When dealing with time-series data, abstraction techniques should also take into account the underlying temporal characteristics. This thesis focuses on different data abstraction and pattern identification methods particularly in the cases of large 1D time-series and 2D spatio-temporal time-series data which exhibit spatiotemporal discontinuity. Based on the dimensionality and characteristics of the data, this thesis proposes a variety of efficient data-adaptive and user-controlled data abstraction methods that transform the raw data into a symbol sequence. The transformation of raw time-series into a symbol sequence can act as input to different sequence analysis methods from data mining and machine learning communities to identify interesting patterns of user behavior. In the case of very long duration 1D time-series, locally adaptive and user-controlled data approximation methods were presented to simplify the data, while at the same time retaining the perceptually important features. The simplified data were converted into a symbol sequence and a sketch-based pattern identification was then used to identify patterns in the symbolic data using regular expression based pattern matching. The method was applied to financial time-series and patterns such as head-and-shoulders, double and triple-top patterns were identified using hand drawn sketches in an interactive manner. Through data smoothing, the data approximation step also enables visualization of inherent patterns in the time-series representation while at the same time retaining perceptually important points. Very long duration 2D spatio-temporal eye tracking data sets that exhibit spatio-temporal discontinuity was transformed into symbolic data using scalable clustering and hierarchical cluster merging processes, each of which can be

parallelized. The raw data is transformed into a symbol sequence with each symbol representing a region of interest in the eye gaze data. The identified regions of interest can also be displayed in a Space-Time Cube (STC) that captures both the temporal and contextual information. Through interactive filtering, zooming and geometric transformation, the STC representation along with linked views enables interactive data exploration. Using different sequence analysis methods, the symbol sequences are analyzed further to identify temporal patterns in the data set. Data collected from air traffic control officers from the domain of Air traffic control were used as application examples to demonstrate the results.

Identification for Automotive Systems Jul 30 2022 Increasing complexity and performance and reliability expectations make modeling of automotive system both more difficult and more urgent. Automotive control has slowly evolved from an add-on to classical engine and vehicle design to a key technology to enforce consumption, pollution and safety limits. Modeling, however, is still mainly based on classical methods, even though much progress has been done in the identification community to speed it up and improve it. This book, the product of a workshop of representatives of different communities, offers an insight on how to close the gap and exploit this progress for the next generations of vehicles.

Identification and Expression of G Protein-Coupled Receptors May 16 2021 The past decade has seen tremendous advances in the study of G protein-coupled receptors (GPCRs), including the molecular cloning and identification of more than 100 hundred GPCR genes. But while GPCRs serve as targets for more than 300 medicines in the modern pharmacopoeia, the shrinking pool of known ligands and the continuing discovery of orphan GPCR genes have underscored the need for new approaches to ligand identification. Identification and Expression of G Protein-Coupled Receptors addresses this new direction in GPCR biochemistry-

offering a definitive laboratory bench manual that emphasizes expression over primary cloning strategies. In a series of expert contributions by well-known researchers, this book provides detailed protocols for various expression systems-from bacteria to mammalian cells-as well as straightforward opinions on the advantages and shortcomings of each approach. Topics covered include: * Homology screening and the polymerase chain reaction in the cloning of GPCR genes * Cloning of GPCRs using mammalian cell expression * GPCR informatics and the orphan problem * The use of Xenopus laevis oocytes for the study of GPCRs * Stable expression of GPCRs in mammalian cells * Heterologous expression in primary cell cultures * Expression of GPCR in Escherichia coli * Large scale expression and purification of GPCRs in mammalian cells * High-level expression of GPCRs in the Baculovirus/Sf9 cell expression system * Expression of GPCRs in Drosophila Schneider 2 cells * Methods for genetic analysis and ligand identification using heterologous GPCRs expressed in Saccharomyces cerevisiae Supplemented with numerous photographs and illustrations, Identification and Expression of G Protein-Coupled Receptors is important reading for biochemists, pharmacologists, neuroscientists, structural biologists, and anyone involved in GPCR-based research. It delivers a wealth of useful advice, practical tips, and invaluable insight into trends at the cutting-edge of current research. *ENOVALE* Sep 27 2019 Without sustained innovation, most organizations will simply fade away. Linking Conjoint Analysis and QFD Aug 19 2021 Inhaltsangabe:Zusammenfassung: Die vorliegende Arbeit (in Englisch) beschäftigt sich mit der Integration der Methodik Conjointanalyse (CA) in den Quality Function Deployment Prozeß, um den QFD-Prozeß in Entscheidungs- und Bewertungssituationen zu unterstützen. Im Mittelpunkt steht dabei die Untersuchung der gängigen Conjointmethoden auf Anwendbarkeit und Eignung für groß angelegte Studien, wie z. B. QFD-Anwendungen. Detailliert wird dabei auf eine Erweiterung oder Unterstützung der Conjointanalyse eingegangen, um eine Vielzahl an Merkmalen und Merkmalsausprägungen (Kundenanforderungen) berücksichtigen zu können. Die kommerzielle Anwendung der einzelnen Methodiken, eine Fragebogenauswertung sowie ein Vergleich von 21 CA- und 3 der bekanntesten QFD Software-tools runden diese Arbeit ab. Abstract: This paper is structured into 5 chapters: Chapter 1 contains an introduction into the problem area and the aim of the thesis. Moreover, it gives a survey of the procedure to reach the target of extending and supporting several Conjoint Analysis methodologies to be able for an integration into the Quality Function Deployment approach with its huge amount of customer requirements (attributes and levels). Chapter 2 shows the integration of Conjoint Analysis and Quality Function Deployment into the Total Quality Management concept as quality improving, customer orientated (key word mass customization), and cost reducing tools. The importance to support Quality Function Deployment by Conjoint Analysis is pointed out to lead over to the main chapter of the paper. Chapter 3 is dedicated to several Conjoint Analysis models and the way in which to extend and support these methods, so that an integration into a large

industrial study such as a Quality Function Deployment application can take place without any problems. To this purpose several conjoint techniques are described in detail, are extended by further techniques, and are compared to each other concerning their validity so that, finally, explicit recommendations can be given. The commercial use of Conjoint Analysis and the method transfer into several software-tools round off this chapter. Chapter 4 describes the Quality Function Deployment methodology in relation to the aim of this paper. The central subject is the House of Quality and its places where the Conjoint Analysis technique(s) can be applied. Results about the commercial use of several software-tools finish this chapter. Chapter 5 sums up [...]
