Free Fall Jun 18 2021 I've moved past what happened on Del Rey, and I've kept the secret of what I did-what we did-buried deep. But I'm afraid I'll never move past what happened six months later in Amsterdam. When Ellis Prior, an old friend of my dad's, walked back into my life, we became fast friends, and he showed me things I can't forget-things that brought me to my knees. But I walked away from that life, and I never looked back. It's been three years, but I can no longer ignore it.It awoke a hunger inside of me.A craving for something new.Something powerful.Now Hanna Thurber is on Del Rey looking for a place to escape, and I'm all too eager to provide. This ballerina is anything but delicate, and the chemistry between us is electric. But the past won't stay dead, and Ellis Prior finds his way to the island too. Suddenly, there is something pulling the three of us together. What starts as innocent and fun turns into an attraction that is undeniably forbidden.

There are no secrets on the island. There is only us. And the truth I can no longer ignore. Free Fall is an MMF romance with explicit sexual content. It is a follow-up to Gravity, and although each story can be read separately, they are meant to be read in order.

We Free the Stars Aug 21 2021 A New York Times bestseller! The second book in the Sands of Arawiya duology by the masterful Hafsah Faizal—the follow-up to the smash New York Times bestselling novel *We Hunt the Flame*. Darkness surged in his veins. Power bled from her bones. The battle on Sharr is over. The Arz has fallen. Altair may be captive, but Zafira, Nasir, and Kifah are bound for Sultan's Keep, determined to finish the plan Altair set in motion: restoring the hearts of the Sisters of Old to the minarets of each caliphate, finally bringing magic to all of Arawiya. But they are low on resources and allies alike, and the kingdom teems with fear of the Lion of the Night's return. As the zumra plots to overthrow Arawiya's darkest threat, Nasir fights to command the magic in his blood. He must learn to hone his power, to wield it against not only the Lion but his father as well, trapped under the Lion's control. Zafira battles a very different darkness festering in her through her bond with the Jawarat—it hums with voices, pushing her to the brink of sanity and to the edge of a chaos she dares not unleash. In spite of everything, Zafira and Nasir find themselves falling into a love they can't stand to lose . . . But time is running out, and if order is to be restored, drastic sacrifices will have to be made. Lush and striking, hopeful and devastating, *We Free the Stars* is the masterful conclusion to the Sands of Arawiya duology by New York Times–bestselling author Hafsah Faizal.

Interpretable Machine Learning Aug 09 2020 This book is about making machine learning models and their decisions interpretable. After exploring the concepts of interpretability, you will learn about simple, interpretable models such as decision trees, decision rules and linear regression. Later chapters focus on general model-agnostic methods for interpreting black box models like feature importance and accumulated local effects and explaining individual predictions with Shapley values and LIME. All interpretation methods are explained in depth and discussed critically. How do they work under the hood? What are their strengths and weaknesses? How can their outputs be interpreted? This book will enable you to select and correctly apply the interpretation method that is most suitable for your machine learning project.

Deep Learning Aug 01 2022 An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, *Deep Learning* is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX *Deep*

learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

Religious Liberty, Volume 2 Dec 25 2021 One of the most respected and influential scholars of religious liberty in our time, Douglas Laycock has argued many crucial religious liberty cases in the U.S. appellate courts and Supreme Court. His noteworthy scholarly and popular writings are being collected in four comprehensive volumes under the title *Religious Liberty*. This first volume gives the big picture of religious liberty in the United States, fitting a vast range of disparate disputes into a coherent pattern - from public school prayers to private school vouchers to regulation of churches and believers.
