The New Engineering Contract Apr 28 2020 The introduction of the New Engineering Contract (NEC) encourages a systematic approach to contracting which is multidisciplinary in nature and fully interlocked in form. The NEC is intended by its supporters to be more flexible and easier to use than any current leading traditional standard forms of contract. It is believed that these features reduce adversariality and disputes. The NEC seeks to achieve this aim primarily through co-operative management techniques and incentives built into the NEC's procedures. This commentary analyses and evaluates these and related claims of innovation. The New Engineering Contract: A legal commentary examines the background to the NEC, its design objectives, structure, procedures and likely judicial interpretation to determine whether it improves upon the traditional standard forms of contract. Special attention is given in the commentary to the development and the significance of the principles underlying preparation of the NEC as well as the arguments in favour of and against them. Throughout the detailed commentary upon the NEC clauses comparisons to the traditional forms are also made to highlight unique features and principles of general application. The conclusion reached is that the NEC does make a significant contribution to the development of standard forms of contract, addresses many of their short comings and offers one of the best models for their future development, direction and design. The commentary draws upon the body of the project management literature and legal analysis to support its conclusions. The New Engineering Contract: A legal commentary will be essential reading for lawyers, barristers and solicitors, as well as engineers and project managers.

for contractors and their staff, this book explains how the NEC3 contract works and provides answers to common questions. It presents complicated concepts in a simple, straightforward and understandable way, focusing mainly on day-to-day use. Steven Evans, an expert with thirty years of experience in construction, considers all the provisions of the contract and explains the procedures, obligations, and liabilities contained within it. NEC3 ECC is a process-based contract based on project management best practices. The Transformation of the Armed Forces Nov 04 2020 Information technology (IT) has had, and will continue to have, a deep impact on the defence sector. The most advanced countries, not only the U.S. but also France, Great Britain and Italy, over the past few years have undergone a transformation of their armed forces aimed at exploiting the strategic advantages of IT. The goal pursued in Europe, and also promoted by NATO, is Network Enabled Capability (NEC). That is combining equipment and soldiers, as well as different doctrinal, procedural, technical and organizational elements, into a single network to obtain their interaction in order to achieve substantial strategic superiority. In practice, this also occurs with a strong, efficient and secure telecommunications network, and through netcentric modernization of armed forces' capability and systems aimed at connecting them to the net. This research paper analyzes the military netcentric modernization and transformation programs - still in progress - in France, Britain and Italy, with special focus on the joint program led by the Italian army called "Forza NEC". Opportunities and challenges of "Forza NEC" have been considered according to the Italian armed force's requirements, developed during two decades of experience in international military operations, as well as in the light of the evolution of strategic doctrine at a European and transatlantic level. Particular attention has been devoted to the interaction between industry and the armed forces, and to the involvement of many Italian companies in different "Forza NEC" activities, as it represents one of the pillars of the procurement program.

Technological Innovation and Defence: The Forza NEC Program in the Euro-Atlantic Framework Jun 30 2020 Technological innovation and the military have always been in a state of constant interaction, fostered especially during the post-Cold War period. In this context, the present study focuses on the relationship of Italian, American, British, French and German Armed Forces with Information Communication Technology (ICT). The aim is to analyse in a Euro-Atlantic perspective the path undertaken by the Italian Army to develop Network Enabled Capabilities (NEC) through the "Forza NEC" Program. The acronym NEC refers to the interconnection of different elements of the Armed Forces in a single broad network, making them interact in order to achieve a strategic superiority. The book is composed of three chapters, which offer respectively an analysis of the American case, an overview of recent developments in France, Germany and the UK, and a discussion of the situation in Italy. The volume - which comes four years after the IAI publication

The Transformation of Armed Forces: The Forza NEC Program – aims at analysing state of the art of the evolving relationship between technological innovation and the Armed Forces. This evolution is hindered by the fact that efforts to digitize and interconnect land forces and their equipment by using ICT sometimes clash with both operational difficulties and budget constraints. Such a clash poses challenges and roadblocks on the way towards NEC undertaken by the Armed Forces of the countries discussed in this book.

Practical Guide to the NEC3 Engineering and Construction Contract Nov 16 2021 Launched in 1993, the NEC Engineering and Construction Contract has become one of the UK's leading standard forms of contract for major construction and civil engineering projects. The third edition, popularly known as NEC3, is a process based contract embodying project and commercial management best practice, so its basic philosophy differs from the more adversarial approach of other standard construction contracts. In addition, in September 2011, changes were introduced to cater for the amendments to the Housing Grants, Construction and Regeneration Act 1996 contained in the Local Democracy, Economic Development and Construction Act 2009, which became effective for all new contracts entered into from 1 October 2011. These amendments have been incorporated into the text. A Practical Guide to the NEC3 Engineering and Construction Contract will be useful to everyone in the construction industry working on a project under this contract. It will be of interest to the complete construction supply chain, including employers, construction professions, contractors and sub-contractors, as well as consultants and lawyers advising any of these parties, either in the preparation of contract documentation or the day to day management or the resolution of problem situations which may arise.
