Trust the Brand - Corporate Reputation Management in Private Banking Dec 23 2021
Reputation is the sum of individual perceptions, experiences and beliefs in the mind of a company's stakeholder. Therefore, synchronous stakeholder communication and interaction has to respect the needs of all parties involved. Reputation management is the total of concepts, processes and structures that are directed towards the effective management of reputation within a company. It covers all activities to establish, preserve, improve and defend reputation systematically. Private banking is a highly sensitive and trust requiring business. A strong bank brand and a healthy reputation are its key success factors. Private banks concentrate on prosperous clientele; therefore, they know that the loss of the good name is one of the major business risks. Although the significant role of reputation in private banking is commonly clear, a systematic management of corporate reputation is rarely. This book investigates the current status of reputation management in private banking and identifies reputation drivers. Consequently, a survey on German private banks is being conducted. Based upon the findings, a structure for corporate reputation management under aspects of good corporate governance will be derived. Regarding corporate reputation management as a consulting product, opportunities for the consulting industry are presented in conclusion.

Risk Analysis for Islamic Banks Jul 06 2020 Islamic finance is emerging as a rapidly growing part of the financial sector in the Islamic world and is not restricted to Islamic countries, but is spreading wherever there is a sizable Muslim community. According to some estimates, more than 250 financial institutions in over 45 countries practice some form of

Islamic finance, and the industry has been growing at a rate of more than 15 percent annually for the past several years. The market's current annual turnover is estimated to be \$70 billion, compared with a mere \$5 billion in 1985, and is projected to hit the \$100 billion mark by the turn of the century. Since the emergence of Islamic banks in the early 1970s, considerable research has been conducted, mainly focusing on the viability, design and operations of a deposit-accepting financial institution, which operates primarily on the basis of profit and loss partnerships rather than interest. This publication provides a comprehensive overview of topics related to the assessment, analysis, and management of various types of risks in the field of Islamic banking. It is an attempt to provide a high-level framework (aimed at non-specialist executives) attuned to the current realities of changing economies and Islamic financial markets. This approach emphasizes the accountability of key players in the corporate governance process in relation to the management of different dimensions of Islamic financial risk.
